

Mobile Dispatcher App Update

We've released a new version of the app with improved UI, better stability, and several really useful new features.

What's new:

- Edge-to-Edge mode - the app now uses the full screen space
- Faster and easier quick geofence creation/editing
- New MAX notification channel
- Added EGTS_I protocol support for the retransmitter
- Improved parameters panel
- Added support for custom maps
- Better stability and performance
- Bug fixes and internal improvements

We continue improving Mobile Dispatcher to make working with LiveGPSTracks from a smartphone convenient for everyday use - on the road, on-site, in the dispatch office, or simply wherever you are.

If you already use the app - make sure to update to the latest version. And if you haven't tried it yet - now is a great time

Download or update the app:
