

Real Time GPS Tracker version 4.1.1

A new version 4.1.1 of our Real Time GPS Tracker software for the Android operating system has been released.

List of changes 4.1.1:

- Added module for step-by-step customisation of the application operation in the background
- Improved auto-start algorithm of the application, in particular on car stereos.
- Added ability to automatically minimise the application window when autostarting from third-party software.
- Bug fixes

Our app is available for installation in the app stores:
