

## Color indication of the tracker status on the map

Regardless of which tracker icon is set, there is a color indication of the tracker status.

- ❌ Green color of the icon - the tracker regularly sends data with an interval of less than 5 minutes (the tracker is considered to be on)
- ❌ Yellow color of the icon - the tracker did not send data for 5 minutes
- ❌ Red color of the icon - the tracker has not sent data for more than 10 minutes (the tracker is considered turned off)
- ❌ The blue color of the icon is an approximate location (coordinates determined based on cell towers, wi-fi networks, or other alternative methods)
- ❌ A circle of several colors - the tracker sent a packet without coordinates (Ping packet)  
What is a Ping packet is described in detail in this article of our documentation.

Red, yellow and green indicator appears for all tracker models.

Blue and multi-colored - only for those models that support these methods of sending coordinates.
