

Monitoring objects through the Google Earth program

Create the tracking link at the livegpstracks.com

- Create a tracking link. How links are created is described [here](#)
- In the link creation window, activate **"NetworkLink for Google Earth"**
- Optionally fill in the name of the link. The name will not be transferred to Google Earth, but only serves as a reminder in the settings.
- If you want to limit the viewing period, fill in the date fields. The movement of the tracker on the created link will be displayed only during the specified period.
- Click the **"Add"** button

Without group Create a new group

Model	IMEI
1. RealTimeTracker for Android Real Time Gps Tracker App RTT Configurator RTT Commands Parameters settings Group: not set Time corr.: 3 Speed corr.: 0 Icon:	b4626a57c3ad7368

Private tracking links

1: https://livegpstracks.com/dv_35916926901339828937053.html
from 2023-08-01, 00:01 to 2023-08-06, 23:59, link for client

Add a link

NetworkLink Google Earth: ☒

Link description:

Password (can be left empty):

Date and time of the displaying (permanent if empty):
 -

Clean Clean Clean Clean

☐ Disable the track review ☐ Enable chat ☐ Enable chat for guests

Add

The link should appear in the list.

NetworkLink Google Earth
Permanent, NetworkLink Google Earth

Add a link

By default, it is assumed that the link is used to track a single tracker, so the "Fly to View" option is enabled and the camera follows the object as it moves.

The added link should be displayed in the left field of the program.
Select element and the tracker will appear on the map.
Now you can watch the movement of the tracker online in Google Earth.

The option is available on the tariffs: **“Simple”**, **“Professional”**
