

How to connect tracker in free test mode on paid tariffs?

On paid tariffs, when adding a device, the connection fee is deducted (for more details, see [Rules of charging for monitoring services](#)).

To avoid connection errors (error when entering IMEI, tracker sends shortened IMEI, etc.), you can connect the tracker as a test tracker. We strongly recommend to always connect the tracker as a test tracker. Make sure that the tracker appears on the map (green coloured icon) and only then transfer to the tariff with charging.

Features of the test device:

- Using a test tracker is free of charge
- Only one tracker can be connected as a test tracker at a time.
- Only viewing option is available for the test tracker.
- The test device is not intended for testing the service operation on paid tariffs.
- The device is automatically deleted 7 days after connection

Intended Use Case:

- Set up the tracker
- Connect to your account as a test tracker
- Make the tracker start displaying real location
- Upgrade the tracker to a tariff
- Connect another tracker as a test tracker and repeat the steps above.

How to connect a tracker as a test tracker?

- Add a tracker as a regular tracker: [How to connect a tracker](#).
- But, before you add the device to your account, tick "Add device as test device".
- Only after that, click the "Add" button.

The screenshot shows a web form titled "A new tracker connecting". It contains four steps: Step 1 (Tracker model: Gosafe G606), Step 2 (IMEI: orion.livegpstracks.com (5.9.136.109)), Step 3 (IMEI: 3345642345632), and Step 4 (Device type: Test device). A red box highlights the "Free test device." checkbox, which is checked. A red arrow points from the "Free test device." text in the right-hand information box to this checkbox. The right-hand box contains text about the free test device, including a warning about the subscription fee and a recommendation to add the tracker as a test device. At the bottom, there is a green "Add a tracker" button, a price of "for 0 EUR" with a blue information icon, and a note: "The test tracker will be removed automatically in 7 days."

The test device is always at the top of the list. In place of the tracking links you can see information about restricted use.

The screenshot shows the 'Connected devices (GPS/GSM trackers)' page. At the top, there's a navigation bar with links like Home, GPS Tracking, Travel Online, Tracks storage, Tools, Soft, Settings (highlighted), Help, Contacts, En, and Sign Out. Below this is a sub-header for 'Settings' and the 'Live GPS Tracks' logo. The main content area has a breadcrumb trail: <<< Map | Management | Log | Geofences | Reports | Finance | Plans & Pricing | How to connect a tracker | Available models. Below this is a filter bar: > My trackers | Operators | Fixed objects | Trackers owned by others | Settings. On the right, it shows 'Plan: Professional' and 'Balance: 901.43 EUR' with a 'Refill' link. The title 'Connected devices (GPS/GSM trackers)' is centered. Below it are sort options: 'Sort by: Creating order' and 'Ascending', with an 'Apply' button. A table header shows 'Without group' and 'Create a new group'. The table has two columns: 'Model' and 'IMEI'. The first row is for a 'Gosafe G606' device with IMEI '3345642345632'. It is marked as a 'Test device' and has a 'Remove the device' link. To the right of the table, a red box highlights the 'Private tracking links' section, which contains a warning: 'Test device, use is limited:' followed by a list of restrictions: data stored for 24 hours, no links, no adding devices, no reports, no events log, no tracks, and no geofences. It also states the tracker will be removed in 7 days and provides a link to switch to a paid plan: '<Yes, switch to the paid plan.>'. A red arrow points from the 'Remove the device' link to the 'Private tracking links' section.

Settings for account, trackers, personal details, balance refilling, change of password and other data.
